

11::11 GOLD STAKING PROGRAM (public)

ALLTRA
SmartChain

Overview

The **11::11 Gold Staking Program** is a secure, tiered staking protocol built on the ALLTRA SmartChain, allowing holders of the **gold-backed 11::11 token** to earn up to **10% APY** by locking their tokens over a 12-month period. Designed to be both rewarding and accessible, this protocol blends blockchain transparency with real-world asset backing.

Eligibility & Access

- Only **whitelisted wallets** are permitted to participate.
- Once whitelisted, users will see the staking app integrated into the cockpit dashboard.
- The app is secured via smart contract and user permissions are enforced on-chain.

Staking Mechanics

- **Initial Stake:**
Users input the desired amount of 11::11, approve the transaction, and lock their tokens into the smart contract.
Funds are escrowed and locked for 12 months.
- **Compounding:**
Weekly compounding is available. After one week has passed, users may "compound" to add interest to the principal.
This increases the base amount used to calculate future interest.

- **Harvesting:**

Users may "harvest" accrued interest at any time. However, this resets the compounding clock and may reduce maximum long-term returns.

- **Adding to a Stake:**

Users can add additional 11::11 at any time during the staking period, increasing their principal and future interest potential.

- **Withdrawal:**

After 12 months, users may harvest remaining interest and withdraw their full balance. A new stake can be initiated immediately after.

Tiered Rewards Structure

To encourage broader participation, the staking system offers **7 tiers** of APY based on stake size:

Tier	Stake Range (USD)	APY	Tier Name
1	\$100 – \$999	3.5%	Entry
2	\$1,000 – \$4,999	4.75%	Starter
3	\$5,000 – \$9,999	6.0%	Growing
4	\$10,000 – \$19,999	7.25%	Mid
5	\$20,000 – \$29,999	8.0%	High Mid
6	\$30,000 – \$39,999	9.0%	Premium
7	\$40,000 – \$49,999	10.0%	Top Tier

Smart Contract Logic Summary

- Stake initiation and compounding are subject to wallet approval (ERC-20).
- Compound cooldown: 1 week after each compound.
- Harvesting resets compound eligibility.
- Stake additions are treated as top-ups and recalculated accordingly.
- Principal + compound interest released only after 12 months.

Why 11::11?

11::11 is not just another staking token — it's **gold-backed, DeFi-integrated**, and **whale-resistant** due to tier caps. This creates an ideal environment for individuals seeking sustainable crypto yield without sacrificing stability.

Conclusion

The 11::11 staking program provides a compelling entry into the gold-backed crypto economy. With a transparent tier system, compounding mechanics, and strong returns, it balances the best of traditional savings with DeFi innovation.
